### **The Scientist and Engineer's Guide to Digital Signal**

In signal processing, sampling is the reduction of a continuous-time signal to a discrete-time signal. A common example is the conversion of a sound wave (a continuous signal) to a sequence of samples (a discrete-time signal).. A sample is a value or set of values at a point in time and/or space.. A sampler is a subsystem or operation that extracts samples from a continuous signal.

This is an educational blog aimed at helping the reader understand the theory behind digital signal processing blocks used in digital communication transmitter and receiver. The theory is explained using classical text books as reference accompanied with simulation model using Matlab and/or Octave scripts.

A signal is recorded digitally by an analog-to-digital converter, which measures the amplitude of an analog signal at regular intervals, which are specified by the sample rate, and then stores these sampled numbers in computer hardware. The fundamental problem with numbers on computers is that the range of values that can be represented is finite, which means that during sampling, the ...

Digital Signal Processing is distinguished from other areas in computer science by the unique type of data it uses: signals. In most cases, these signals originate as sensory data from the real world: seismic vibrations, visual images, sound waves, etc. DSP is the mathematics, the algorithms, and ...

H Alpha Filter Question for Nikon DSLRs - posted in DSLR & Digital Camera Astro Imaging & Processing: Pretty much every filter that is sold on Amazon, for example, the product descriptions only mention CCDs. Are there separate filters H alpha and SII that are for DSLRs? Or the CCD ones can also be used with a DSLR 1.25 nosepiece adapter?

Remember this sequence from the Matrix ? "There is no spoon". Well recently I'm hearing people talk more and more about "resolution" in digital audio, and I'm here to tell you "There is no resolution. It's a red herring" an idea-virus left over from the earliest days of digital audio, perpetuated [!]

MAQ20 PID Control in a Home Heating Application. In this application, a MAQ20 Data Acquisition and Control System along with DSCA Signal Conditioning Modules, standard sensors, and actuators control the combustion process of a batch fed cordwood boiler to optimum efficiency throughout a burn cycle by means of a draft inducer blower and modulation of primary and secondary air dampers.

This document discusses the principles of measuring performance parameters in Synchronous Digital Hierarchy (SDH) networks. This document provides a description of basic alarms associated with SDH networks, and also signal processes involved in an Add/Drop Multiplexer (ADM). Some of the most significant ADM alarms that are generated at various points in the SDH network are illustrated.
