

fundamentals of metal machining pdf

The three principal machining processes are classified as turning, drilling and milling. Other operations falling into miscellaneous categories include shaping, planing, boring, broaching and sawing. Turning operations are operations that rotate the workpiece as the primary method of moving metal against the cutting tool.

MACHINING OPERATIONS AND MACHINE TOOLS

Milling is the process of machining using rotary cutters to remove material by advancing a cutter into a workpiece. This may be done varying direction on one or several axes, cutter head speed, and pressure. Milling covers a wide variety of different operations and machines, on scales from small individual parts to large, heavy-duty gang milling operations.

Milling (machining) - Wikipedia

Rotary ultrasonic machining (RUM) of ceramics combines grinding operation with the method of ultrasonic machining. A core drill tool made of a metal bonded diamond grits is used in the rotary ultrasonic machining (commonly drilling).
