The key developments in regards to corrosion of Mg alloys are summarized pictorially in Fig. 2. It is noted that a recent surge in activity in the last decade has indicated that there are significant problems that the issues typically associated with Mg alloys are capable of being resolved.

An acid dissociation constant,  $K_a$ , (also known as acidity constant, or acid-ionization constant) is a quantitative measure of the strength of an acid in solution. It is the equilibrium constant for a chemical reaction known as dissociation in the context of acid-base reactions. In aqueous solution, the equilibrium of acid dissociation can be written symbolically as:

Surface tension is the elastic tendency of a fluid surface which makes it acquire the least surface area possible. Surface tension allows insects (e.g. water striders), usually denser than water, to float and slide on a water surface. At liquid–air interfaces, surface tension results from the greater attraction of liquid molecules to each other (due to cohesion) than to the molecules in the ...

Real-world manipulation of anions needs receptors to operate in solution. By combining experiment and theory, Flood and colleagues discovered a  $1/r$  solvent dependence of solution-phase anion affinities. Surprisingly, electrostatics no longer dominates affinity in solutions of even moderate polarity. Their findings also enable accurate predictions of anion affinities across a wide range of ...
