A windmill is a mill that converts the energy of wind into rotational energy by means of vanes called sails or blades. Centuries ago, windmills usually were used to mill grain (), pump water (), or both. The majority of modern windmills take the form of wind turbines used to generate electricity, or windpumps used to pump water, either for land drainage or to extract groundwater.

Windmill - Wikipedia

Environmental engineering is the branch of engineering which applies scientific and engineering principles to:
. protect human health and infrastructure from environmental dangers; protect environments, both local and global, from natural and human threats, including control of waste;
