students to investigate the human body's structures and functions. The models in each chapter focus on a particular system of the body. The chapters are independent and can be used in any order. Featured within each chapter are the following sections: Model Illustration This picture, labeled with the model's name, shows how the finished model looks.

It is a place for our body to store fat and minerals, like calcium. It is where the body makes most of its new blood cells. Bones come in many shapes and sizes. The long bones have a long shaft and two bigger ends. These include the bones of the arms and legs. The largest bone in the body, the femur, is a long bone.

An ESD simulator based on human body model has been built. The circuit of the ESD simulator consists of three main parts: DC voltage supply part, voltage adjustment and measurement part, and HBM discharging part, as illustrated in Fig. 2. Fig. 2: The circuit of ESD simulator that is based on the human body model.

The human body is composed of countless major anatomical structures, which means your model will become quite dense with increasing numbers of objects, therefore itâ€™s important to keep the polycount reasonably low without compromising the quality or limiting the detail.
