A prediction (Latin prÃ¦-, "before," and dicere, "to say"), or forecast, is a statement about a future event.A prediction is often, but not always, based upon experience or knowledge. There is no universal agreement about the exact difference between the two terms; different authors and disciplines ascribe different connotations. (Contrast with estimation.)

**Prediction - Wikipedia**
Affective forecasting (also known as hedonic forecasting, or the hedonic forecasting mechanism) is the prediction of one's affect (emotional state) in the future. As a process that influences preferences, decisions, and behavior, affective forecasting is studied by both psychologists and economists, with broad applications.

Abstract. Information about an individual's place and date of birth can be exploited to predict his or her Social Security number (SSN). Using only publicly available information, we observed a correlation between individuals' SSNs and their birth data and found that for younger cohorts the correlation allows statistical inference of private SSNs.

Although water temperature is important to stream biota, it is difficult to collect in a spatially and temporally continuous fashion. We used remotely-sensed Land Surface Temperature (LST) data to estimate mean daily stream temperature for every confluence-to-confluence reach in the John Day River, OR, USA for a ten year period. Models were built at three spatial scales: site-specific ...

The Federal Reserve has typically used a short-term interest rate as the policy tool for achieving its macroeconomic goals. However, with short-term rates constrained near zero for much of the past decade, the Fed was impelled to use two unconventional monetary policy tools: forward guidance and quantitative easing.
