

### **principles of modern radar pdf**

Radar is a detection system that uses radio waves to determine the range, angle, or velocity of objects. It can be used to detect aircraft, ships, spacecraft, guided missiles, motor vehicles, weather formations, and terrain. A radar system consists of a transmitter producing electromagnetic waves in the radio or microwaves domain, a transmitting antenna, a receiving antenna (often the same ...

A microwave oven (also commonly referred to as a microwave) is an electric oven that heats and cooks food by exposing it to electromagnetic radiation in the microwave frequency range. This induces polar molecules in the food to rotate and produce thermal energy in a process known as dielectric heating. Microwave ovens heat foods quickly and efficiently because excitation is fairly uniform in the ...

Introduction The word "RADAR" is an acronym for RAdio Detection And Ranging. As it was originally conceived, radio waves were used to detect the presence of a target and to determine its distance or range. The reflection of radio waves by objects was first noted more than a century ago. In 1903, the reflection of radio

Radar er en forkortelse for RAdio Detection And Ranging. Grundprincippet i en radar er, at et radarsignal (kort impuls med en høj frekvens, typisk 1-40 GHz) udsendes fra en antenne i en retning. Hvis radarstrålen rammer en genstand (f.eks. et fly), reflekteres en lille del af strålen og opfanges af modtageren gennem antennen. Signalet forstærkes og ender som et 'blip' på en skærm.
