To interpret the coefficients for the standardized regression, take age as an example. The coefficient for age in the full model is -.019. This means that when age increases by one standard deviation, opinions towards immigration will move .019 standard deviations towards an unfavorable view of immigration.

[19] perform dynamic analysis by partially off-loading execution of firmware to actual hardware. While such an approach is precise, it incurs significant hurdles for large-scale analysis. First, the requirement that the analyst must obtain the physical hardware for the device under test poses a significant financial burden.
