

weather radar networking cost pdf

The COST 73 programme is aimed at the exchange and combination of radar data in real time, problems of equipment standardization and of imaging, the processing and transmission of data from and to network centres and, in general terms, the acquisition of pre-operational experience for the creation of a European weather radar network.

Weather radar networking | Projects | IC-COST | CORDIS

In the context of COST cooperation, which is supported by the Commission of the European Communities, the COST 73 project (1986-1991) associates 16 countries in Western Europe with the aim of setting up a weather radar network providing real-time measurements of rain, snow or hail precipitations.

The tradition of weather radar collaboration at the European level dates back to COST 72 (Measurement of precipitation by radar) which started in 1979 and which presented its final re-port in 1985. The results from COST 72 led to the launching of COST 73 (Weather Radar Networking; Newsome 1992) which ended in 1991.

Update on the European Weather Radar Network (OPERA)

The Management Committee of the COST 73 Project have laid the foundations upon which future international operational radar networking may be built in Europe, and has indicated the directions that future weather radar technological developments might take.

Weather Radar Scanning. In meteorology, radars usually employ one of two scanning techniques: Plan

Position Indicator (PPI): The radar holds its elevation angle constant but varies its azimuth angle. If the radar rotates through 360 degrees, the scan is called a "surveillance scan".
